

Product-Info – AKI-2

Automatic tool initialization for Zünd modular tool inserts

AKI-2 (**A**utomatic **K**nife **I**nitialisation) combined with the Zünd TOOL MANAGER make operating Zünd cutters easier than ever. The tool setup process now requires only three simple steps:

- ① **Insert tool** ② **Position AKI-2** ③ **Start initialization**

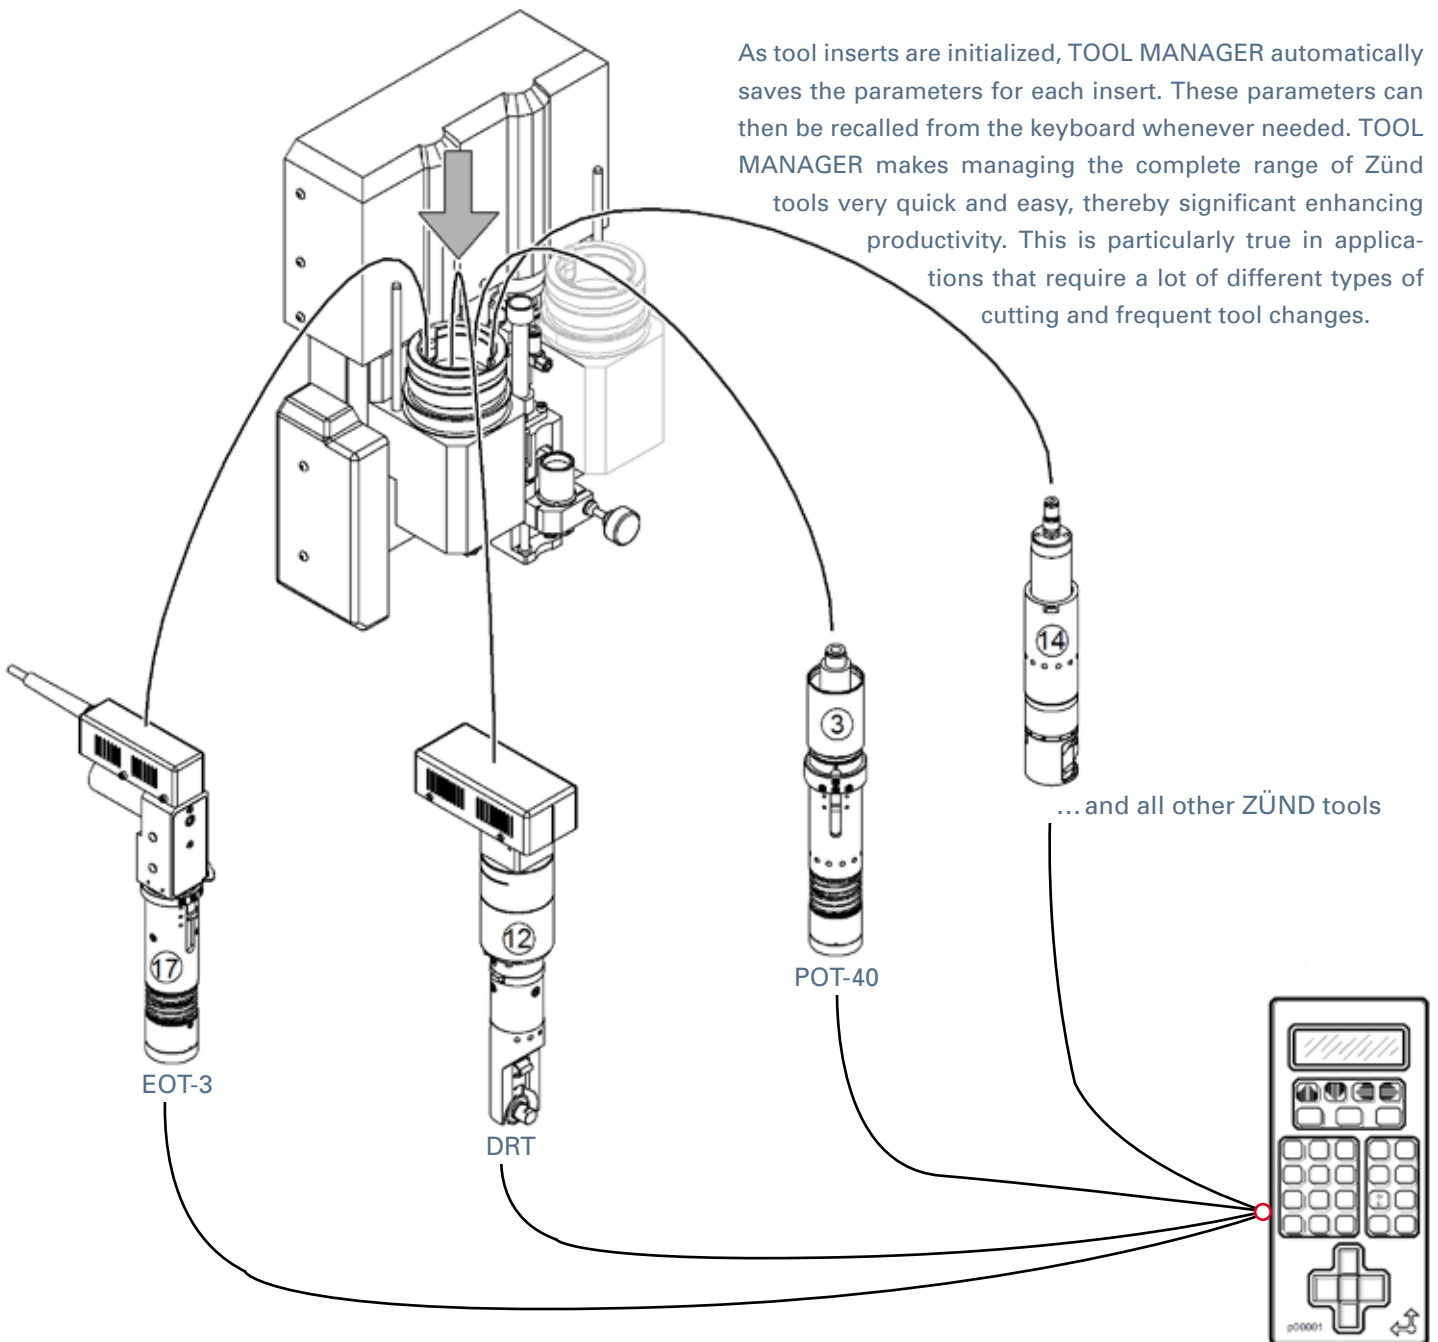

AKI-2 can be used for any tool (1–9), and makes tool setup automatic, fast and reliable, at the same time eliminating potential for errors inherent in manual tool setup.

Product-Info – TOOL MANAGER

TOOL MANAGER – saving tool parameters

As tool inserts are initialized, TOOL MANAGER automatically saves the parameters for each insert. These parameters can then be recalled from the keyboard whenever needed. TOOL MANAGER makes managing the complete range of Zünd tools very quick and easy, thereby significantly enhancing productivity. This is particularly true in applications that require a lot of different types of cutting and frequent tool changes.

User benefits

- Extremely user-friendly operation
- Automatic tool assignment
- Enhanced productivity
- Minimized potential for errors
- Speedy tool change over
- Exact and reliable blade-depth positioning
- Longer-lasting consumables (reduced wear)
